

Homework 4 - report

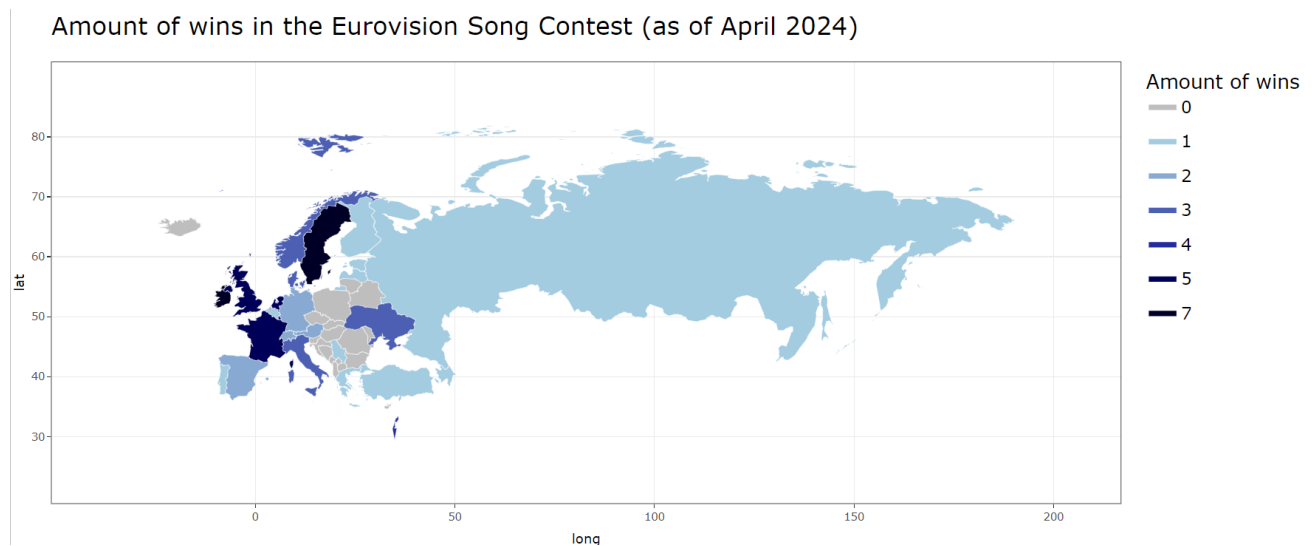

Ewelina Pres

April 21, 2024

Data Source

The data comes from a [Wikipedia page](#) on Eurovision Song Contest winners over the years. I extracted data from the table "Winners of the Eurovision Song Contest" located in the section "Winners by year".

Visualisation and conclusions

The visualisation presents amount of wins in the Eurovision Song Contest per country in the years 1956-2023, i.e. in the first 67 editions of the contest.

As we can see the wins distribution is not uniform. An average Western or Northern European country won the Eurovision several times, while almost all countries in Central and Southern Europe haven't even won a single contest yet.

Does that mean Western Europe has better taste in music? It is all the participating countries who choose the winner, so maybe it is not that Western Europe has better taste in music - it might be that the whole Europe has **western** taste in music.
